www.austar-hearing.net

Austar Hearing Science and Technology (Xiamen) Co.,Ltd was established in 2003. Austar Hearing is a national high-tech enterprise specializing in the research and development, production and sales of hearing aids and other acoustic related products. It is committed to improve the hearing of the hearing impaired through science and technology.

Austar hearing invest a new factory in Xiamen with an area of around 12,000 square meters to build a large-scale domestic hearing aid production and R&D base;Austar hearing have been established more than ten bases in the United States, Canada, Norway, Singapore, Thailand and other regions, and there are more than 3,500 agents and distributors worldwide.

Independent research and development, innovative development

Austar Hearing has established a research and development team composed of experts from well-known global universities to independently develop high-performance audio signal processing algorithms and obtain multiple patent certificates, leading the rapid development of China's hearing aid technology.

In 2018, the automated production system was introduced, and it was the first to realize the automated production of hearing aids in China. The precise automated operation greatly increased the production capacity and made the quality more stable.

Diversification categories, First-class quality

Diversification product line meet the diversified needs; it is equipped with a professional reliability laboratory and entire no-echo chamber, reach international testing standards to ensure product quality. Star service, trustworthy

One-stop service, regional exclusive customer service, exclusive training department and other customer services are perfect, by users and industry praise

ABOUT US

Hear Nature Enjoy Life

FUGUE H

Wireless Hearing Aids

Fugue H9 / Fugue H7 / Fugue H5 / Fugue H3

Fugue H

Using the new Nature2.0 platform, an open wireless processing platform based on high-precision 4+1 multi-core architecture, 24bit high-definition, and 48 independent signal processing channels. Breaking through technical limitations, realizing wide-band signal processing for hearing aids, with a frequency response range of up to 12kHz, signal processing speed is twice than previous generation product, Comprehensive improvement of hearing sound quality, bringing unprecedented hearing experience.

Adaptation to different hearing impaired

○ Speech processing system , clear and accurate

According to the characteristics of pronunciation, the developed speech perception system automatically recognizes the speech environment, and use syllable compression, intelligent noise suppression, directional focusing and other technologies for real-time matching according to different hearing loss levels and environments to obtain clear speech perception and improve speech understanding and precise listening.

○ 48 independent channels precise noise reduction, restore pure sound

The intelligent noise suppression management system has 48 independent noise reduction processing channels, which can perform independent noise suppression, protect voice sounds and reduce noise in complex environments, "Quiet" the system noise generated in the operating path of the hearing aid, and maintain the required voice signal, at the same, time eliminate the unwanted background, more natural and comfortable to hear.

○ Bluetooth connection, smart and easy

Convenient to make calls and listen to music

With MFi function, it can be directly connected with iOS mobile phone/tablet, it is a hearing aid, and also, a Bluetooth headset.

Easily watch TV, Clear TV sound

Support TV Mate, TV audio is transmitted to hearing aids through TV Mate, reducing speech loss in spatial distance.

Convenient for independent fitting operation.

Support mobile phone APP independent fitting, parameters adjustment of adaptation scene, sound quality, volume, noise reduction

Hearing with no limits

o AI intelligent panoramic analysis, hearing without boundaries

AI intelligent panoramic real-time analysis system adopts real-time frequency domain algorithm, embedded speech perception system, 360° intelligent scanning and focusing of the sound source, accurate speech and noise analysis and positioning, real-time analysis of thousands of sound environments, and identification of current hearing environment. The system automatically switch between 6 hearing scene, allowing users to obtain better hearing effects in different environments

o Intelligent directional, more accurate listening

Multiple directional mode switching:

Optional multiple directional modes, omnidirectional, cardioid, supercardioid, extreme cardioid, bipolar, etc. to adapt to different scenes and environments.

Adaptive directional focus:

Focus on different directional models, search for noise sources and automatically change the directional mode, focus on the speech sound from the front, while inhibiting up to 20 noise sources from interference of speech, improving listening and recognition ability.

Synchronous fusion of both ears:

Wear hearing aids in both ears to realize the intercommunication of signals between both ears. When the environment is adapted and the volume/program change, both ears can be changed at the same time, achieving automation, intelligence, and synchronization.

Comfortable to wear

o Multi-speed feedback wall, bid farewell to the annoying whistle

Feedback path scanning pre-processes possible feedback frequency points to establish a feedback wall, combined with the real-time dynamic feedback tracking processor (FBC I), to suppress the hearing aid whistle in the budding state.

o Tinnitus Masking

According to the individual characteristics of tinnitus, various natural environmental sounds such as white noise, narrow-band noise, pink noise (rain noise), effectively alleviate tinnitus problems.

Humanized design

o IP68 nano technology dustproof and waterproof,

Fugue H BTE devices are designed with a sense of science and technology, beautiful in appearance, ergonomic, and comfortable to wear. Achieve the highest level of dustproof grade 6 and the highest waterproof grade of 8. High-quality products make it more reliable to use.

o Multilingual reminder, easy to operate

It has various sound functions such as boot sound, low voltage sound, program switching sound, etc., which is convenient for daily use and operation.

FUGUE Y

Fugue Y2 / Fugue Y1

Fugue Y

Nature 1.0 Technology platform

Fugue Y series hearing aids adopt the latest multi-core technology processing platform, Nature 1.0 platform information processing is faster, the frequency response range is wider, hearing effect is clearer and easier to understand.

Response to different life scenes freely and listen to your heart

AI intelligent panoramic real-time analysis can cope with thousands of different sound environments, and automatically switch the listening mode according to the current listening environment.

Intelligent noise reduction

The intelligent squelch management system can cope with independent noise suppression, reduce noise in complex environments, and sounds more comfortable.

Farewell feedback

Feedback path scanning pre-processes possible feedback frequency points to establish a feedback wall, combined with real-time dynamic feedback tracking processor (FBC II), to suppress hearing aid whistle in the bud.

Tinnitus masking

According to different tinnitus characteristics, Fugue Y adapts to individual conditions and effectively masks tinnitus.

IP57 NANO dustproof & waterproof

FUGUE N

N50 / N30 / N10

Subvert the traditional fashion hearing aid

Fugue N have excellent sound processing functions and a fully digital intelligent system , listen to music or make calls, bringing nature, smart fashion listening experience.

○ Won the German iF Design Award

Fugue N neck-band hearing aids have won the German iF Design Award for their appearance design. The shape is unique and ingenious, ergonomic and fit to ear and wear comfortably. Convenient to take and wear. Sounds more stereo and clear.

Intelligent Bluetooth Smart Life

Mobile APP intelligent control, Bluetooth wireless connection, users can easily debug at any time through the mobile phone, answer calls, video chat, etc., Master and Smart life.

R&L Volume adjustment

Remote control microphone

Noise reduction

Frequency adjustment

Microphone directional

Combined with GPS location setting

Watch TV easily

Neck-band hearing aids can match with TV Join. Within 10 meters of the TV, the audio of electronic devices such as TV, computers, tablets and other electronic devices can be directly transmitted to the hearing aids via Bluetooth wireless, easily enjoy audio-visual entertainment.

Intelligent-Digital System

Fugue N neck-band hearing aids are based on ultra-low power consumption DSP chip embedded sound processing software, with 2 default program modes (quiet/noisy) and custom modes, multiple signal processing channels, adaptive noise reduction management system, adaptive feedback suppression and other functions, comfortable listening in any environment.

Automatically detect inserted into ears

With the function of detect inserted into ears, take off headset automatic sleep, insert into ears automatic wake up.

Rechargeable and more convenient

Fugue N neck-band hearing aid adopt rechargeable design, use during the day and charged at night, less attention and save money.

Nano dustproof and waterproof, full protection

Fugue N neck-band hearing aid realizes dustproof and waterproof. Whether it is at work or during exercise, fully protect hearing aids, more reliable to use.

APP Fitting

AustarLink

Suitable for Fugue H series

- Compatible with iOS, Android
- Switch between different scenes
- Volume control
- High and Low frequency adjustment
- Directional spatial sound source positioning
- Noise reduction range adjustment
- Tinnitus masking control
- Custom scene
- Use log query function

mHear

Suitable for Fugue N

- Compatible with iOS, Android
- Switch between different scenes
- Volume Control
- Sound quality adjustment
- Directional spatial sound source positioning
- Noise reduction range adjustment
- Remote microphone
- Custom scene

Audiologist

Suitable for IA platform

- Compatible with iOS, Android system
- Program switching
- Volume Control
- High and Low frequency adjustment
- Fitting assistant

Scan QR Code download and install APP

AustarLink (Fugue H series)

mHear (Fugue N)

Audiologist (IA platform)

Hearing aid accessories

TV Mate Bluetooth (Suitable for Fugue H)

- Wireless Bluetooth (BLE) technology
- Receive audio input directly from TV, Audio equipment, computer, MP3, etc.
- Exquisite appearance
- Up to 10 meters wireless transmission distance
- Very short transmission delay, audio and video synchronization
- Clear sound and distortion-free

TV Join Bluetooth TV box (Suitable for Fugue N)

- Classic Bluetooth technology
- Receive audio directly from TV, Audio equipment, computer, MP3, etc.
- Audio input
- Up to 15 meters wireless transmission distance
- Short delay, clear sound and distortion-free
- Small and exquisite

RIC/BTE-OE tube size measurement

Choose to measure the left or right ear according to the L or R marked on the front and back of the measuring caliper.

When measuring, place the caliper on the back of the auricle as shown in the picture, and keep the horizontal line A in a horizontal state. Match the line B on the upper wall of the ear canal opening to the model marked on the caliper. If the length is between the two models, select the model with the larger value
